PROFESSIONAL PROFILE

Full-Stack developer specialized in Laravel and PHP, building business applications and SaaS platforms with Laravel backends and APIs, Vue interfaces and Flutter mobile apps.

PROFESSIONAL EXPERIENCE

Full-Stack Developer | FleetX | Norwegian logistics SaaS · January 2026 – present

- Built the drivers' daily report: a Flutter app that works offline, where drivers log the day's hours, the work done and expenses such as meals or hotel; approval in Vue and a Laravel backend connected to the tachograph and payroll.
- Designed and built the calculation of emissions per shipment following GLEC v3.2, aligned with ISO 14083, with every factor traceable to its published source.
- Built route profitability calculations combining fuel, driver salary and overtime.

Full-Stack Developer | Gesa Mediación S.L. | Murcia, Spain · October – November 2025

- Sole developer of a nutrition app with AI: designed the architecture and built the Laravel core (REST API, data model and business logic).
- Built the foundation of the Flutter app, with nutritional analysis of photos and PDFs via Firebase AI Logic, push notifications and Firestore sync.

Full-Stack Developer (internship) | Apuestas de Murcia | Murcia, Spain · March – June 2025

- Designed and built the venue-management app that replaced the previous system: operator, managers, furniture, machines and terminals per venue with Laravel, permissions by role, photos of each visit uploaded from a phone (PWA) and a change history.
- Designed the database and optimised queries for reporting views.

SELECTED PROJECTS

Truekapp | truekapp.xyz | Personal project · Live

- Barter platform built with Laravel: real-time chat with Reverb and WebSockets, and an AI assistant with Google Gemini and semantic search.
- Started as a final degree project with two classmates; I later rebuilt it and took over its maintenance and deployment on my own VPS, with Pest tests and continuous integration on GitHub Actions.

VALO·DEX | valodex-app.vercel.app | Personal project with a public demo

- React and TypeScript SPA for browsing Valorant data. The API key stays in a serverless function and each tab limits its requests per minute.

EDUCATION

Higher Technician in Web Application Development | EFA El Campico, Jacarilla, Spain · 2023 – 2025

Technician in IT Systems & Networks | IES Las Espeñetas, Orihuela, Spain · 2020 – 2023

TECHNICAL SKILLS

Backend: Laravel, PHP, MySQL, REST APIs, WebSockets/Reverb, queues, Pest and PHPUnit. Multi-tenant applications.

Frontend: JavaScript, TypeScript, Vue.js, HTML, CSS, Tailwind CSS, Blade, Alpine.js and Astro; React in VALO·DEX.

Mobile & AI: Flutter, Dart, Firebase, Google Gemini (RAG, tool calling, embeddings and vision) and OpenAI API.

Development with AI: Claude Code, Codex and Herdr. Coordinating agents across models in parallel, delegating focused tasks and reviewing the code before integrating it.

Tools: Git, GitHub Actions, Linux, VPS, Docker, Nginx, Cloudflare and Vercel.

Languages: Native Spanish · Professional English: daily use in meetings and technical presentations.
